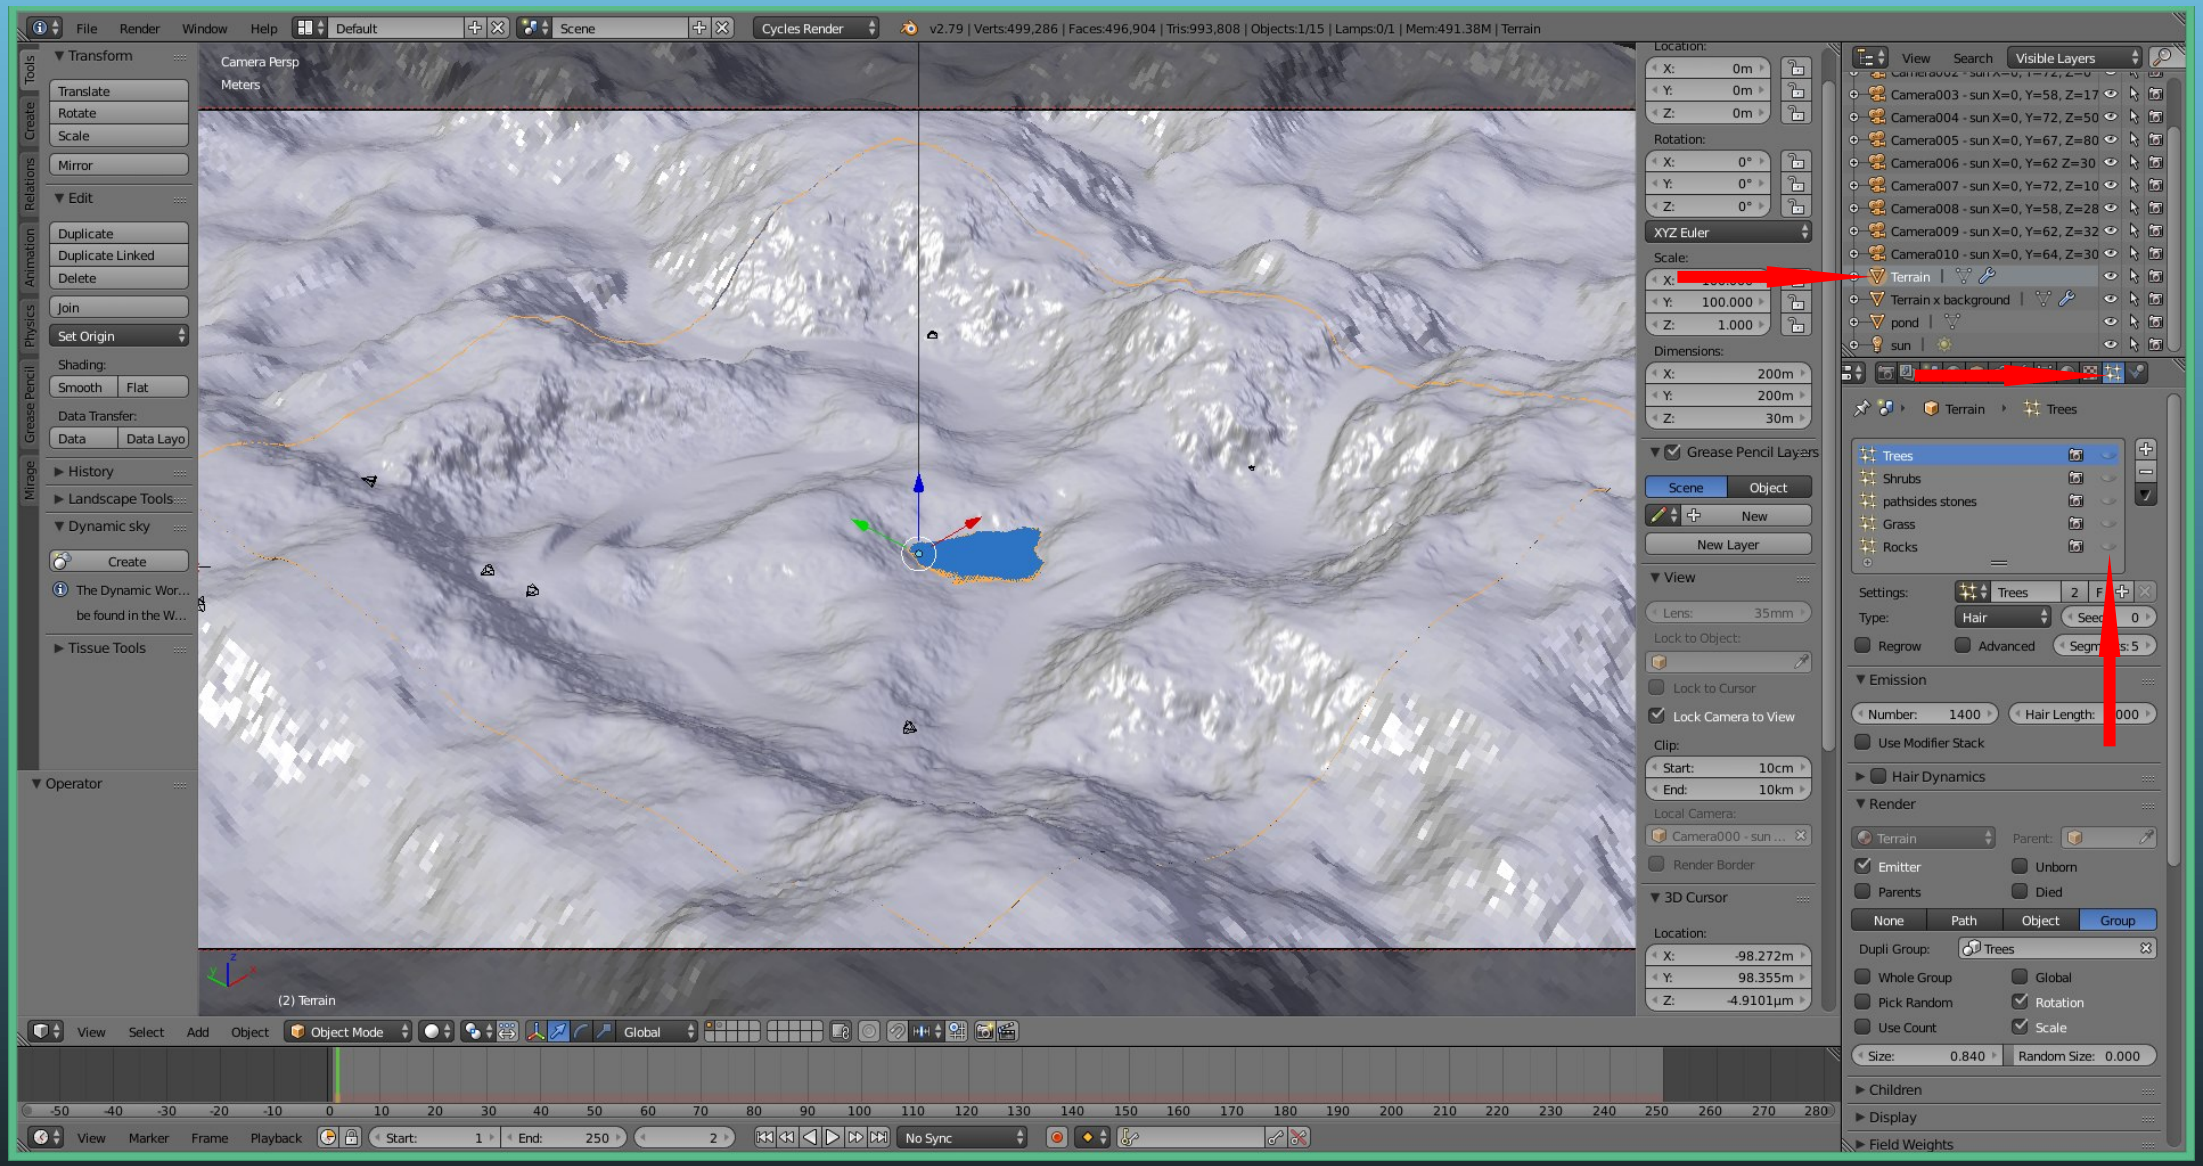
Rough path

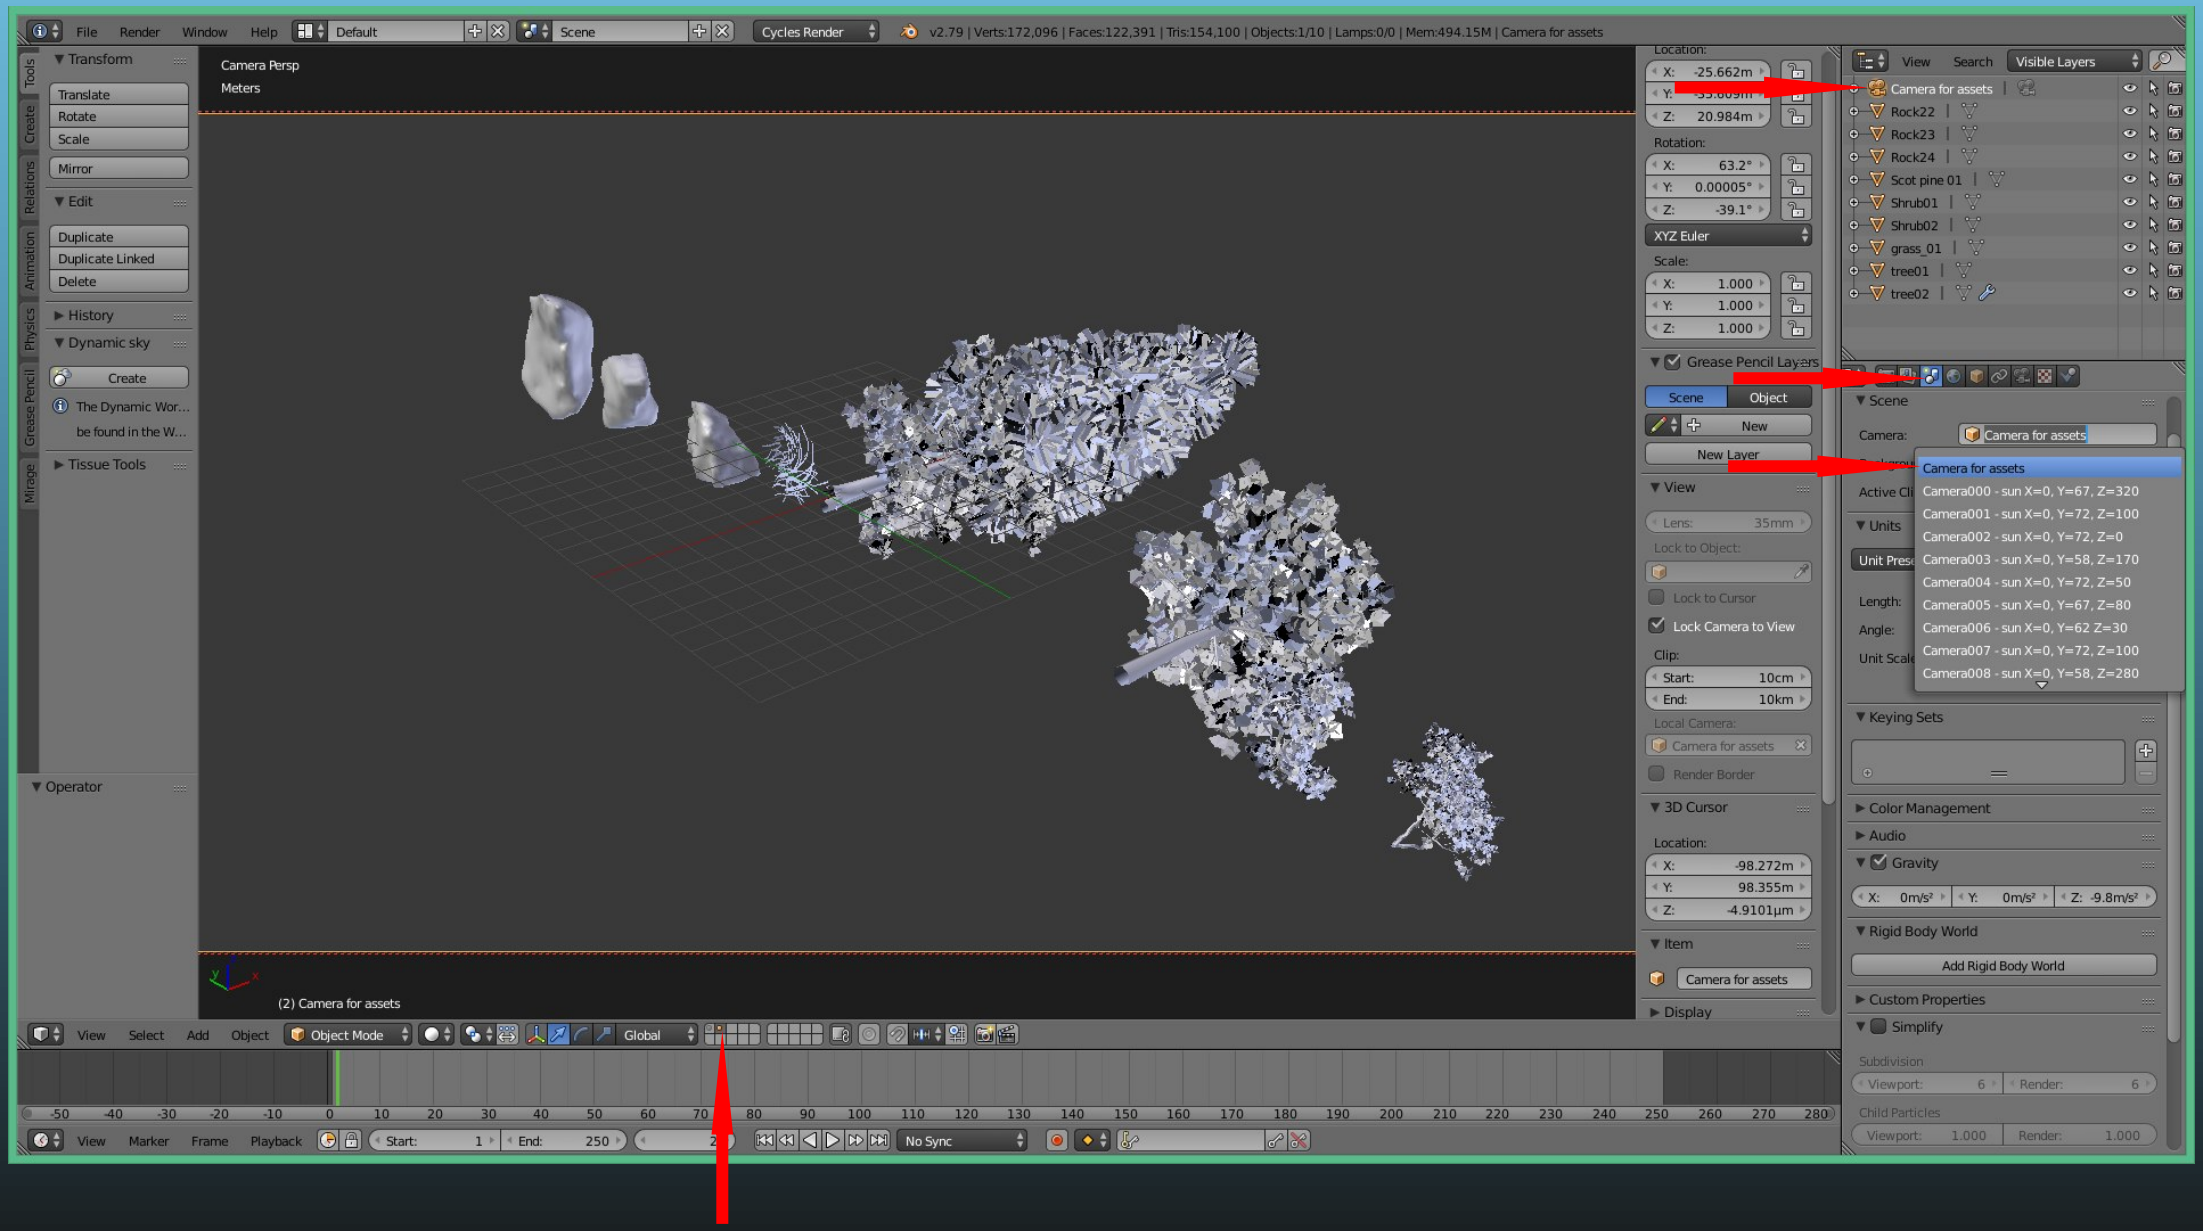
3 things to keep in mind:

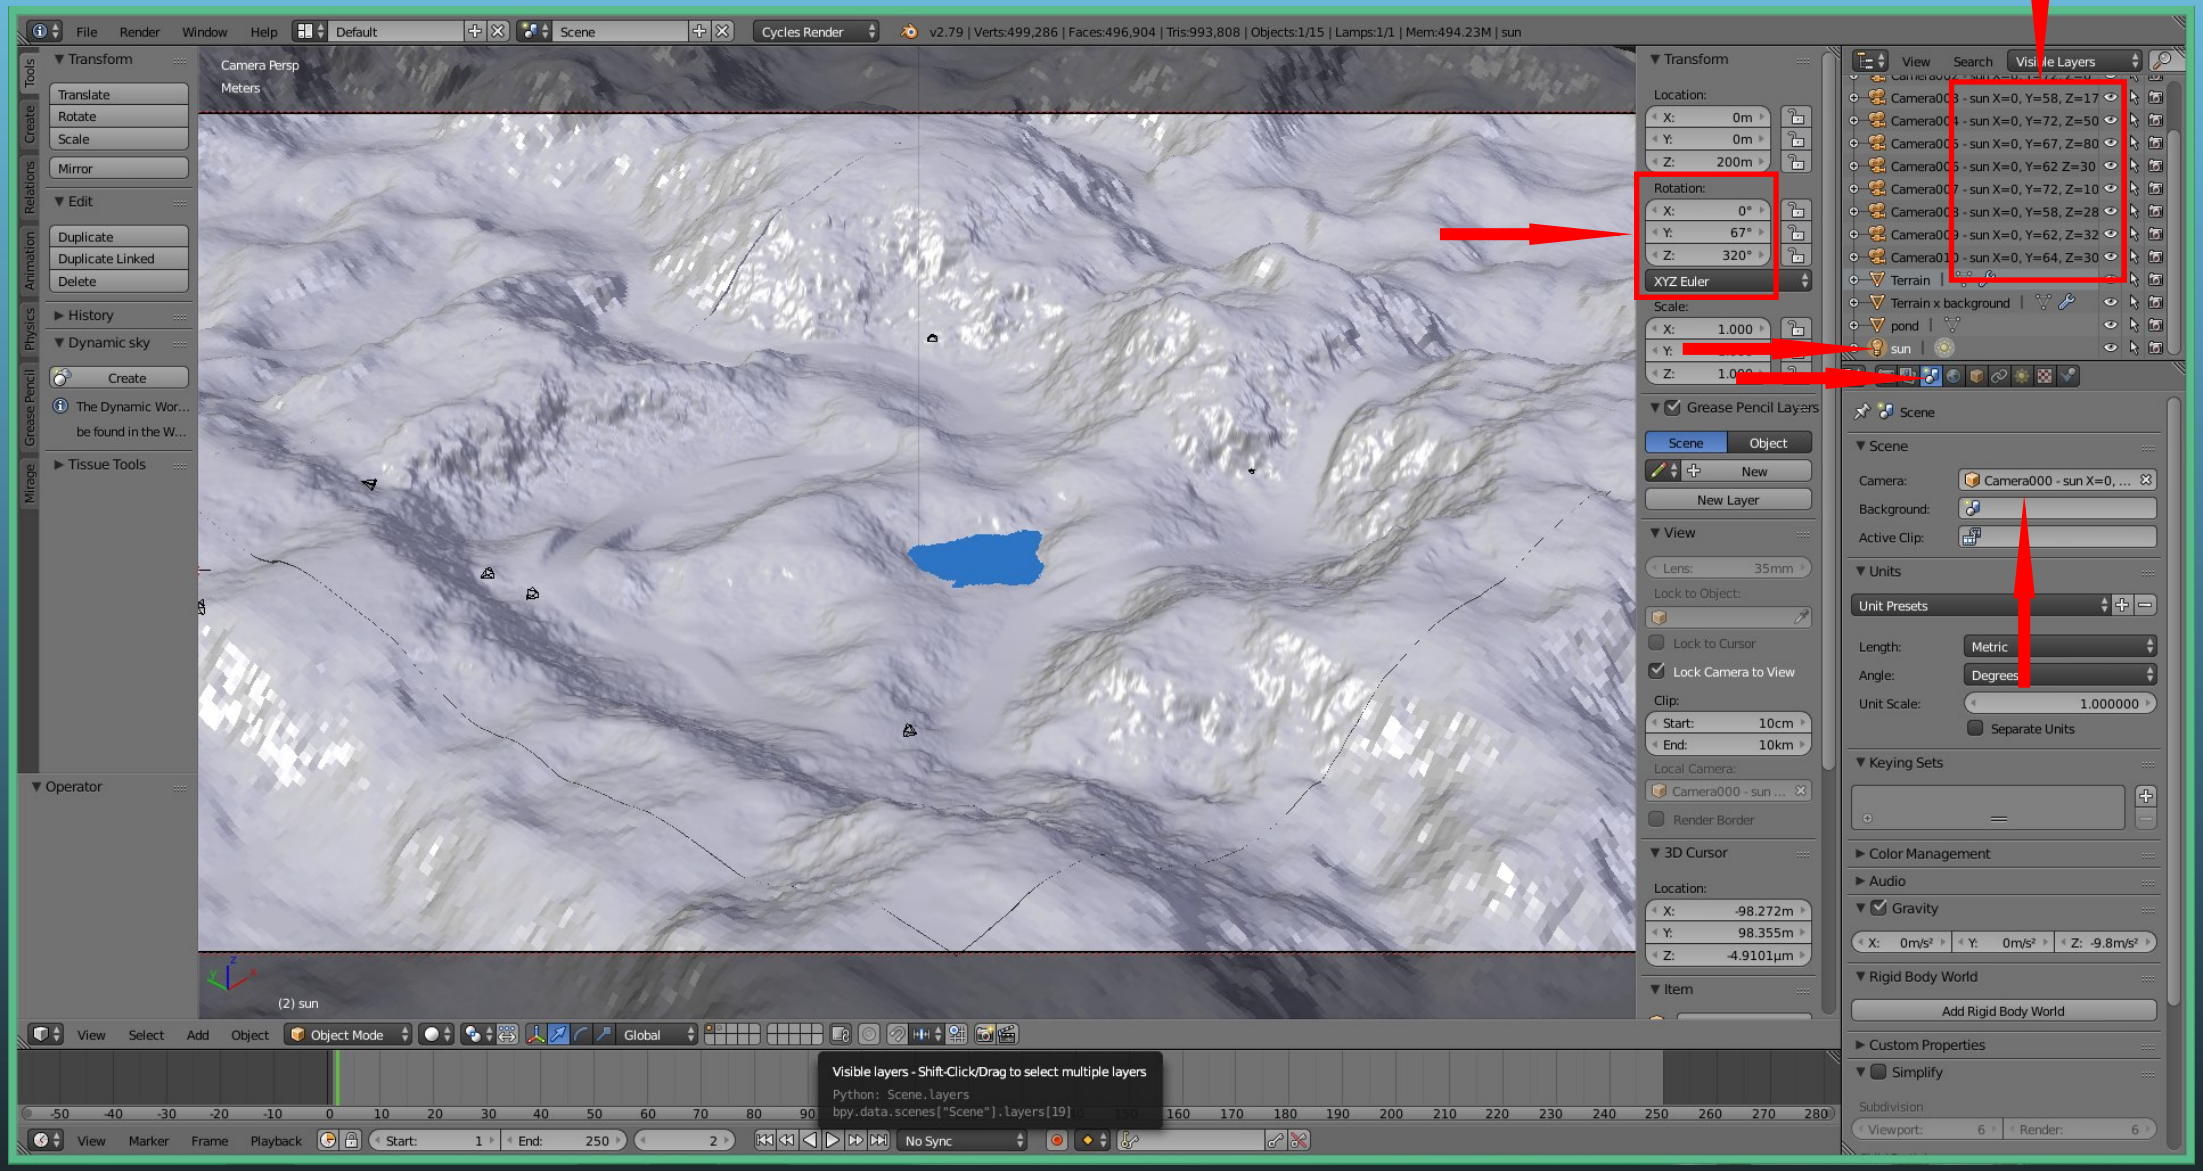
1 - Because of the poor resources of my PC, I had to disable all Particle Systems (ecosystems) from the viewport preview, to manage the scene.
However, they remain enabled for rendering.
If you want to rehabilitate them, maybe to make some changes, you can do it easily, click on the "show_viewports" icons. Look below...



Rough path

2 - If you want to see or manipulate the assets used for ParticleSystems (ecosystems), select its layer... and then its own camera view. Look below...



Rough path


3 - The scene is equipped with 10 camera settings, each of which has its own setting for sunlight.
You can see the sun's rotation values for the X, Y, Z axes marked in the description of each of the camera objects.
Choosing one camera, will set the sun's rotation parameters, Look below...
